

BATTERY ELECTRIC SCISSOR LIFT TABLES

When manual scissor lift tables start being used most hours of a shift it makes real sense to move to powered versions on productivity considerations alone.

They lift at more than twice the speed of manual models and height changes can be done whilst the lifter is being moved into position. The operator's physical effort is removed and the height positioning is completely accurate at the push of a button. Richmond's Battery Electric Single Scissor Lift Table provides the flexibility of all these functions.

The onboard single phase battery charger means that it is easy to plug it in at the end of the Shift so it's ready for the next day.

Model Number	Table Size (mm)	Max Table Height (mm)	Min Table Height (mm)	Lifting Time	Capacity (kg)
SLR022	1010 x 520	950	450	6 sec	500
DOUBLE SCISSOR MODELS					
SLR041	1010 x 520	1618	495	15 sec	500
SLR045	1020 x 620	1720	470	20 sec	500

LOW PROFILE POWERED LIFT TABLES

These stationary lifters are hydraulically operated with a powerful pump and 3 phase AC power.

When lowered with the accompanying ramp, loads can be rolled on and off using Pallet Trucks or Stackers. Exceeds not only safety standards but performance expectations. Loads up to 2000kg are lowered and raised at a controlled speed. The innovative low profile design eliminates the need for pit installation.

Model Number	Platform Size (mm)	Max Height (mm)	Collapsed Height (mm)	Lifting Time	Power Pack	Capacity (kg)
SLR060	1140 x 1450	860	85	22 sec	380V	1000
SLR061	1180 x 1600	870	105	22 sec	380V	2000
